DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 1-42 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The applicants added the limitation "with other non-metallocene -catalyzed random copolymers". This is a negative limitation, which is not supported directly or conceptually by the specification as originally filed.

3. Any negative limitation or exclusionary proviso must have basis in the original disclosure. See *Ex parte Grasselli*, 231 USPQ 393 (Bd. App. 1983) *aff'd mem.*, 738 F.d. 453 (Fed. Cir. 1984). The mere absence of a positive recitation is not basis for exclusion.

4. Claims 1-42 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The phrase "formed from a random copolymer of propylene and ethylene prepared using a metallocene catalyst useful in the polymerization of isotactic polypropylene" is confusing. It is not clear what is random (e.g. the position or the orientation of the monomers), and it is not clear if the polymer is isotactic or not. The applicants merely state that the catalyst used to produce

the polymer "is useful in the polymerization of isotactic polypropylene". The catalyst might also be useful in the polymerization of syndiotactic polypropylene under different conditions.

The examiner suggests language such as an "a metallocene catalyzed, isotactic ethylene propylene copolymer, having a random comonomer distribution". This is conceptually supported by the description of the comonomer placement as being "random with in the isotactic structure", and "uniformly and thoroughly distributed throughout the polymer chain". (Page 12, lines 13+).

Response to Arguments

5. Applicant's arguments with respect to claims 1-42 have been considered but are moot in view of the new ground(s) of rejection.

The applicants amended the claims to remove, JP-11-060833 as prior art, but the reference would be available as prior art if the negative limitation above were deleted.
